Art Unit: 1742

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 1-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kimura et al.

Kimura et al. discloses the invention substantially as claimed. Kimura et al. discloses a titanium alloy comprising:

alloying elements selected from a group comprising Bi in an amount of 0.01-1% (col. 5, line 9, and see Examples 10, 11 and 32); and

alloying elements selected from a group comprising Zr up to 10% and Mo up to 15 % (see col. 3, line 39) and other additional alloying elements as claimed by Applicant and substantially overlapping those as claimed by Applicant, one of ordinary

Art Unit: 1742

skill determining the amount of selected alloying elements based on the overall composition. One of ordinary skill expected utility throughout the selected range of alloy elements.

4. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

5. Claims 1-22 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-3 of U.S. Patent No. 6,572,815 ('815) in view of Kimura et al.

'815 discloses the invention substantially as claimed. '815 discloses a titanium alloy medical device comprising:

a titanium alloy comprising 0.01 to 3% Bi.

However, '815 does not disclose wherein the alloy further contains further alloying elements.

Art Unit: 1742

Kimura et al. teaches at col. 3, lines 12-60, to add Mo up to 15% and Zr up to 10%, and further alloying elements as claimed by Applicant in suitable amounts to improve machinability.

It would have been obvious to one having ordinary skill in the art to add alloying elements as taught by Kimura et al. to the base titanium alloy of '815 in order to further improve machinability.
